

# Frontend Developer Assignment

## Overview

In order to get a better impression of your technical skills, we would like to offer you this coding assignment.

Your solution might become the basis for a deeper discussion with the engineering team at the final stage of the interviewing process.

We think a good solution could be found within approximately 6 hours. That said, we will expect to receive it within 3 days.

## Guidelines

- Document your code as needed
- Use Git features that you see fit (source code link)

## Task Details

Create System For User management.

- Provided the following JSON response from an API endpoint:

```
[
{
  "name": "ahmed",
  "id": 1,
  "email": "a@test.com",
  "phone": 4353453543,
  "Status": "active"
},
{
  "name": "omar",
  "id": 2,
  "email": "a@test.com",
  "phone": 372636722,
  "Status": "active"
},
{
  "name": "ali",
  "id": 3,
  "email": "c@test.com",
  "phone": 82736,
  "Status": "soft_deleted"
},
]
```

## Task 1 : User Crud Operations

- Build a users list page with the following details:
  - > each user has data like : name,phone,mail,and status(active,soft\_deleted)
  - > listing page must have pagination , sorting and filtration.
- Add / edit with validation error messages(required,wrong data)
- delete user

Task 2: Localization (ar,en)

Task 3:Authentication (login with dummy data)

- The system has 2 types of users
  - >admin : can view or control all system
  - >basic user : can view only listing (without delete or edit)

Task 4: Notification Messages with success & failure for all actions

Task 5: Ui Responsive

We wish you best of luck

When you are done kindly send the task to
